

Melpool 55/G

Description	Use	Specifications
<p>Dosing instructions (practical advice):</p> <ul style="list-style-type: none"> • Always correct the pH value between 7.2 and 7.6 • During treatment, the pump should be running for 3 to 4 hours • Dissolve the product in a bucket of cool water and then distribute it evenly over the surface of the water • An amount of 18 g in 10 m³ of water increases the chlorine content by approx. 1 ppm (mg/l) and also increases the cyanuric acid content by approx. 1 ppm (mg/l) • Maintain the chlorine level around 2 to max. 5 ppm (mg/l). The dosage depends strongly on circumstances (temperature, sun and bath load) • With this dosing recommendation, the cyanuric acid content may not exceed 70 ppm (mg/l) (overstabilisation) • For continuous disinfection: every 1 to 2 days 20-30 g per 10 m³ of water • In case of chlorine shock or the presence of algae: approx. 100 g per 10 m³ of water • After chlorine shock, wait until the chlorine value has dropped below 5 ppm (mg/l) before using the pool again • May differ from label texts. Labels are always drawn up according to national rules and regulations <p>Warning:</p> <ul style="list-style-type: none"> • Use biocides safely. Always read the label and product information before use
