

Melpool 70/G

Description	Use	Specifications
<p>Dosing instructions (practical advice):</p> <ul style="list-style-type: none"> • Always correct the pH value between 7.2 and 7.6 • During treatment, the pump should be running for 3 to 4 hours • Dissolve the product in a bucket of cool water and then distribute it evenly over the surface of the water • With unstabilised swimming pool water: daily 30-50 g per 10 m³ of water • Dose half of this amount in the morning and the other half in the evening • In case of chlorine shock or the presence of algae 80-100 g per 10 m³ of water • After a chlorine shock, do not swim until the normal concentration of free chlorine has been reached again • Practice recommendation: maintain chlorine levels between 0.5 and 3 ppm (mg/l) in non-stabilized water • An amount of 15g in 10 m³ of water increases the chlorine content by 1 ppm (mg/l) • The dosage depends strongly on circumstances (temperature, sun and bath load) • Do not use Melpool 70/G in hard water due to the risk of limescale and cloudy water • In case of hard water we recommend Melpool 55/G (https://melpool.i-aspect.com/product/melpool-55-g/) (chlorine shock), Melpool 90/200 (https://melpool.i-aspect.com/product/melpool-90-g/) or Melpool 90/20 (https://melpool.i-aspect.com/product/melpool-90-20/) (continuous disinfection) <p>Warning:</p>
