

DAB ESYBOX DIVER THE PUMP IN THE TANK

A 7" pump that stands in the tank. It has the speed control built in, so it gives constant pressure straight from the tank — set at 3 bar in the factory, adjustable from 1 to 5.5 bar. It moves up to 7.2 m³/h and lifts 55 metres, so several sprinkler zones can run one after another without the pressure dropping.

It is fully waterproof (IP68), has a non-return valve and dry-run protection, and takes water to within 8 cm of the tank floor. Wi-Fi is built in, so a system can be checked without driving to it. The X version adds a suction hose and a float, so the pump takes clean water from just below the surface instead of from the bottom. With roof water, that is the version to fit.

ESYBOX DIVER 55/120
Art. 7033386 / 7033387

Diver X 55/120
with suction hose
and float

DOCKING STATION
Art. 7043934

Lets you lift the
pump out for service
in one move

ALSO IN THE RANGE FOR TANKS AND WELLS

**D.TRON 2
AND D.TRON 3,
ALL SIZES**
Art. 7033714 / 7043937

Fully automatic water
supply for tanks and
rainwater systems, with
built-in sensor and flow
meter.

**DIVERTRON 650 / 900,
M, X AND X
WITH SUCTION KIT**
Art. 7043932 / 7037770

Simple automatic
solution for irrigation
and water transfer.

EVERYTHING FROM ONE SUPPLIER

Gutters, downpipes and leaf traps. Filters and tanks. The pump, the break tank and the mains switch. Pipe, fittings and valves. Sprinklers, drip line and controllers. It all comes from one group, on one order, in one delivery.

FREE PLAN FOR YOUR PROJECT

Send us the details and we will work it out for you. Roof area, garden size, number of zones, and how long the garden must last without rain. You get back the full list: tank size, filter type, the right pump, the vessel, the pipe sizes and every fitting.

**FREE, AND YOU ARE NOT
TIED TO ANYTHING.**

STRONG WATER INSIDE AND OUTSIDE

**One pump gives full pressure at every tap in the house
and at every sprinkler in the garden.**

Low water pressure is easy to spot. The shower goes weak when someone opens a tap downstairs. The sprinklers only reach half the lawn. The top floor is always the worst.

A booster pump fixes this. It sits between the water and the taps, and it keeps the pressure at the level you set. **It speeds up when more water is used and slows down when less is used**, so the pressure stays the same. That also saves energy, and it makes the pump last longer.

PRESSURE BOOSTING

IN THE HOUSE

Showers, baths, taps, washing machine, dishwasher and toilets. All of them at the same time.

IN THE GARDEN

Sprinklers, drip lines and outside taps. Several zones can run without the pressure dropping.

FROM ANY SOURCE

Mains water, a well, a break tank or a rainwater tank. Pump selection depends on the water source and installation.

A BOOSTER SYSTEM HOW IS IT BUILT?

- 1 WATER SOURCE**
Mains water, well, break tank or rainwater tank. Select the pump according to the water source and application.
- 2 THE PUMP**
Set the pressure once. The pump holds it. Dry-run and frost protection built in.
- 3 INDOOR PIPE**
To showers, taps and appliances, with valves so the pump can be serviced.
- 4 OUTSIDE TAP**
Buried pipe to garden taps, with fittings that can be reached later.
- 5 GARDEN ZONES**
Sprinklers and drip lines, with valves and a controller per zone.

CHOOSE YOUR PUMP

DAB ESYBOX MINI 3

THE ALL-ROUNDER

One box instead of four parts. Draws from up to 8 m deep — mains, well, break tank or rainwater. Set the pressure and it holds it. Quiet enough for a bedroom wall, fits under a worktop, upright or flat.

Art. nr. 7030935

80 L/MIN • 55 M / 5.5 BAR MAX • 1 LITRE VESSEL • SUCTION TO 8 M • IPX4 • 45 DB

DAB ESYBOX POP

FOR SMALL SPACES

DAB's smallest booster for small homes and tight corners. 9 kg, fully assembled, sensors and check valve inside. IPX5 and sound-absorbing, so it can hang outside. Good for one or two bathrooms or one outside tap. Best suited to domestic boosting and smaller garden applications. For larger irrigation systems or multiple sprinklers, choose ESYBOX MINI 3.

THE RAIN IS ALREADY FREE

Your roof can collect thousands of liters of rainwater every year. Catch it, store it and use it when your garden needs it.

Rainwater is soft. Plants like it better than tap water, and it leaves less lime scale in sprinkler nozzles. Stored rainwater can help reduce mains-water use during summer, when garden water demand is highest.

Rainwater is not drinking water. It is used for the garden, the toilet, the washing machine and outside cleaning. Every system below keeps rainwater and mains water fully apart, and switches to mains on its own when the tank runs low.

THE FOUR PARTS

A rainwater system is a chain. If the filter is too small the tank fills with dirt. If the tank is too small it is empty after two dry weeks. If the pump is too small the sprinklers are weak. Get all four right and it simply works.

PART	WHAT IT DOES AND WHAT YOU NEED	ART. NR.
1 Collection	Gutters and downpipes bring roof water to the tank. Size follows roof area and rainfall. Add hoppers and a leaf trap.	0360800
2 Filter	A filter before the tank stops leaves and grit. Self-cleaning types rinse themselves; manual types are cheaper but need cleaning.	7023829
3 Tank	Above ground, partly buried or fully buried. Size it to the longest dry period, not to the roof.	0020245
4 Pump & switch	A pump in the tank, plus a break tank and mains switch so water never runs out.	7023575
