

### **Product description**

Connection set for hydronic pump on a 22 mm water pipe with armoured flexible hoses. Facilitates the connection of, for example, your DAB Easybox (Mini 3) to your existing water pipe, partly due to the change from screw connection to compression fitting.

- Suitable for any hydronic pump with a 1" screw connection
- Suitable for a water pipe with a diameter of 22 mm

### **Consisting of:**

- 2 pieces of pipe compensators 1" stainless steel 316
- 2 pieces 3-piece couplings brass long. \*(see note)\*
- 2 pieces nipples 1" bi. dr. - 22 mm compression brass

\*The threaded nipples in this set are extended due to the recessed arrangement of the pump connections. Standard 3-piece fittings are often shorter, making them difficult to fit, which can result in leakage and damage to the pump\*
